RECONCILIATION SEASON IS HERE

MATH. MODELS. NO MISTAKES.

- NEW SOLVER
- 0 FALSE CLEARS
- 98/100 SCORE

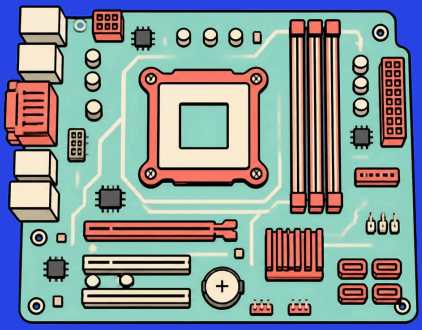

EVERY PAYOUT GETS A GUARD.

12 AGENTS. 4 LANES. 100% DETERMINISTIC MATH.

THE NEW ARCHITECTURE

- **FELLEGI-SUNTER MODEL** It dynamically learns linkage probabilities without hardcoded rules.

- **AMBIGUITY COVERAGE** When subsets tie, the engine refuses to guess. Abstaining is a feature.

- **5-WAY VERIFICATION** It audits the RazorPay report against the bank UTR, ledger, fees, and tax.

NEW THIS YEAR / THE CP-SAT SOLVER

Entity resolution first, then a straight drop into mathematical subset-sum proof. It runs whenever a payout is on the stand.

0 HALLUCINATIONS

96

OUT OF 100 ON THE RAZORPAY BENCHMARK

Exceptional Enterprise Standard. Zero false clears across 1,000+ edge cases.

FUZZY MATH, PROBABILISTIC ML.

LEGACY SYSTEMS

They guess,

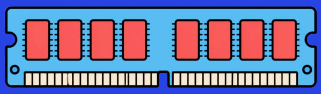

you lose money.

PURE EXACT PROOF.

AMONGRESOLVER

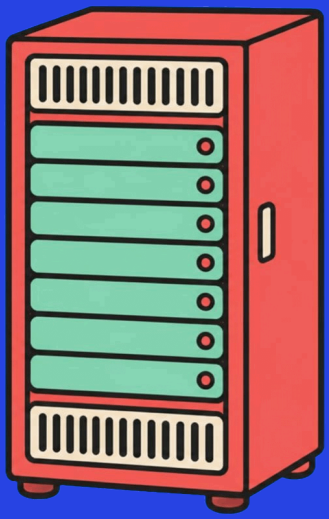

Operations Research. Code decides.

THE FUTURE AT RAZORPAY

PART TWO

FOR EVERY LEDGER AND EVERY BATCH

HOW I'LL ENHANCE THE ENGINE

- **NATIVE MAPPING** Map the engine directly to RazorPay's internal statements for 1-click clears.
- **MULTI-GATEWAY** Scale intake to handle PayU and Stripe side-by-side.
- **LIVE RBI FX** Real-time rates for exact cross-border clearance.

THE 4-LANE WORKFORCE

LANE 1: INTAKE Normalizes CSVs from gateway, bank, and books.

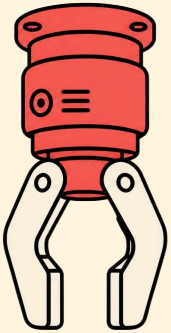

LANE 2: CONSTRAIN Decomposes PG fees & audits Section 194-O tax.

LANE 3: RESOLVE The CP-SAT mathematical engine proves the exact subset.

LANE 4: REPORT Builds hash-chained, cryptographic receipts.

"I DIDN'T JUST BUILD A HACKATHON WRAPPER. I BUILT A FINANCIAL TERMINATOR."

RISHIKESH, SYSTEMS/AI ENGINEER

READY FOR PROduction

WHAT WE PROVED

NUMBERS DON'T LIE.

100 OF 100

On public government checkbooks.

3.1 SECONDS

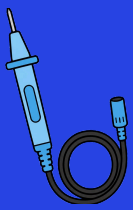

To clear a 50,000-record stress test.

58 FAILURES

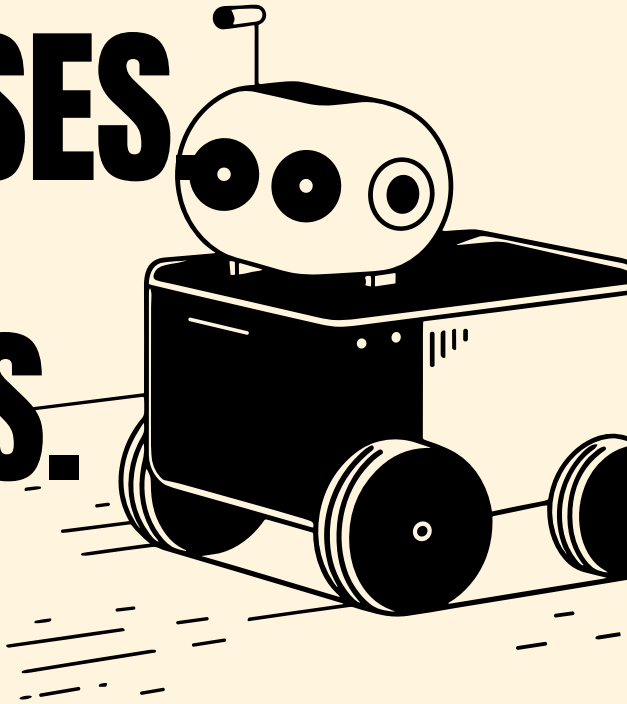

Logged, fixed, and re-measured.

831 TESTS

Running in CI on every commit.

AI PROPOSES CODE DECIDES.

ZERO HALLUCINATIONS TOUCH THE MONEY PATH. EVER.

RECONCILIATION RULES

ENTITY RESOLUTION FIRST

Don't just add numbers. Link references and payout cycles.

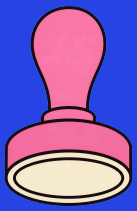

NO GUESSING

If it's ambiguous, ask the investigator agent to intervene.

PROPOSE ONLY

The engine drafts the journal entries. Humans approve them.

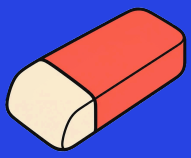

THE RECONRIVER EVALUATION

BLIND TESTING THE ALGORITHM.

THE TEST

Stripped every single reference ID from a third-party dataset.

THE LEARNING

The Fellegi-Sunter model dynamically learned the linkage weights.

THE RESULT

Found 57% of exact sets blind, with zero false clears.

HOW I WORK

MON-FRI

SYSTEMS THINKER

SAT-SUN

OBSESSED WITH RIGOR

ALWAYS

BUILT FOR THE EDGE CASES

SAVE THIS FOR THE NEXT ALL-HANDS

Send it to the engineering team who wants to solve reconciliation forever.

I'd love to discuss how this architecture could work for your team.
